

Integrated Management System Policy

for the areas of quality, nuclear safety, information security, health and safety at work, environment, and the quality of welding process

To ensure sustainable development and competitiveness, VUJE management issues the following statement:

- By applying the latest technical knowledge, we always provide comprehensive services and products, especially in the power engineering and other industries. Our main priorities in these areas include:
 - high level of nuclear safety (it shall be considered in decision-making, it shall have the highest priority and it shall be placed above economic and other interests, it shall not be compromised by other priorities),
 - reliability and reduction of electricity distribution losses.
- We fulfil the requirements, expectations, and high satisfaction of domestic and foreign customers by providing timely and quality products and services.
- Through organizational and technical measures, training, and participation of employees, in accordance with applicable legal and other regulations, we want to ensure:
 - continuous improvement of products and services and of the management system,
 - sufficient number of professionally competent staff, their professional growth and satisfaction,
 - high level of nuclear safety culture,
 - prevention against the use and delivery of false, fraudulent, suspicious items (CFSI),
 - high level of information security,
 - suitable working conditions for safety culture, prevention and minimalization of threats to the health of employees and zero accident rate,
 - prevention of pollution, reduction of adverse effects and protection of the environment, as well as meeting binding limits and decisions.
- We also require compliance with the management system principles by our suppliers.
